

## HANDOUT SUSTAINABILITY

Sustainability is a constant growing requirement. Rules and regulations are set via government measures, through suppliers and clients. Wetac Battery Company is constantly updating its facilities in order to reduce our Ecological Footprint.

In the coming years, the stop of global warming will be one of the key sustainability challenges. There are several new regulations affected to reduce CO2 emissions. Businesses are encouraged to work on a higher and better sustainability efficiency.

### WHY DO YOU RECEIVE THIS HANDOUT?

Wetac Battery Company takes responsibility to reduce the impact on the environment, to save resources and reduce (environmental) costs. We have this registered in our CSR policy, in which we discuss more of our actions and our company policy. The reduction of costs and improving our efficiency is not the only benefit: the contribution we can make to a better world together is still the best reward.

### HOW DOES WETAC REALIZE THIS SUSTAINABILITY?

by using recyclable and recovered material

(partial) electric fleet

invest in sustainable technologies

efficient use of energy

limit the use of packaging material

First aid for all employees, large representation of emergency response personnel

company policy defined in the CSR

a healthy work environment

*Do you have an idea to further expand our sustainability program? Please don't hesitate and let us know!*

Sustainable business means that our company deals with the social, ethical and ecological consequences of our business operations hands-on. We believe in the importance of continually improving our processes and minimizing the impact of our company on the population, the environment and society. In order to pursue these ambitions, we involve employees, suppliers and clients in our decision-making.
